GH1 F

– the flexible ceiling hoist

GH1 F – a flexible, self-installing ceiling hoist

The GH1 F – is a flexible lifting module that is easy to move from one room to another by means of the dedicated transport and storage trolley. It installs and removes itself automatically from the rail system, and thereby eliminates any lifting, stretching or straining by the care staff in the process of moving and installing the hoist.

With the GH1 F you can decide to install rails in more or all of the rooms and settle with a few lifting modules that in the day-to-day care can easily be moved from one room to another.

Flexible, efficient and safe

Once installed the GH1 F gives you exactly the same functionalities as the GH1 lifting module, – and compared with traditional portable hoists this also means that you achieve the same benefits as with a fixed ceiling hoist:

- Lifting height is not limited to the reach of the care staff
- The user does not hang low and can be lifted e.g. directly from a chair to bed, as well as from the floor
- High lifting capacity – up to 255 kg
- The head of the user is free of the lifting module
- The most suitable/appropriate lifting hanger can be used – you can choose among a wide range of detachable lifting hangers
