Stepless
by Guldmann

Can you imagine a world full of obstacles?

A world in which you no longer have control over which buildings, shops, restaurants and trains you can access?

This is what everyday life is like for many people with reduced mobility such as wheelchair users, people with walking frames, pushchairs, etc. Even though great strides have been made in the past few years in terms of accessibility, there is still room for improvement. Improvements which not only ensure proper accessibility but which also contribute to an increased quality of life and greater independence among wheelchair users, for example.

Free movement requires proper access conditions

With our Stepless solutions, we have specialised in accessibility with the intention of creating proper access conditions for people of limited mobility. Our broad product range of ramps, lifting platforms, platform elevators, stairlifts, special solutions and solutions for public transport is a great advantage and makes it possible to find the optimum solution for the project in question.

Special solutions

Improving access conditions to older and listed buildings can often present a challenge. Therefore, we offer bespoke customer solutions based on the customer's needs, the surroundings and

applicable building regulations. The aim is to create aesthetic solutions in harmony with their surroundings.

Over 30 years of experience

V. Guldmann AVS boasts more than 30 years' experience in developing assistive technology products for disabled persons, designed to improve people's quality of life. All our products have been safety-tested and have a safe and timeless design.

If you're looking for ramps, our ramp catalogue can be ordered from our sales department or on our website **www.guldmann.com**, where you can also find more information as well as pictures of our products and solutions.

LIFTING PLATFORMS	4
LP1 - 500 mm	5
LP5 - 500 mm	5
LP5+ - 875 mm	5
LP50H - 500 (750) mm	6
LP8 - 3 m	8
 PUBLIC TRANSPORT	 10
Portable ramps	11
Fixed ramp for trains	11
Lifting platform LP11	11

Stepless lifting platforms are intended for lifting people with reduced mobility (e.g. wheelchair users, people with walking difficulties, people with pushchairs and sack trucks) over level differences of up to 3 m. Lifting platforms require less space than ramp systems and are therefore ideal in places where ramps would be too steep or too long.

LP1

LP1 is a small lifting platform designed for lifting over level differences up to 500 mm. The lifting platform is suitable for locations with limited space. It can be supplied with a side exit on the left/right side and wireless operation.

LP1 specifications

Lifting height, max	500 (609) mm
Lifting capacity	180 kg
Internal dimensions	1167 x 719 mm

LP5

LP5 is designed to fit harmoniously into most living environments. With a lifting capacity of 300 kg and a lifting height of 500 mm, LP5 is the perfect choice for when smaller level differences must be negotiated. It can be supplied with a safety gate for upper levels, a side exit on the left/right side and wireless operation.

LP5 specifications

Lifting height, max	500 (875) mm
Lifting capacity	300 kg
Internal dimensions	1602 x 900 mm

LP5+

With its lightweight design, LP5+ is easy to integrate into different environments – both public and private. LP5+ has a high transparent railing and lifts up to 875 mm. It can be supplied with a safety gate for upper levels, a side exit on the left/right side and wireless operation.

LP5+ specifications

Lifting height, max	875 mm
Lifting capacity	300 kg
Internal dimensions	1602 x 900 mm

LP50H

LP50H is the perfect choice for when you need simple and discreet solutions. LP50H is a lifting platform with combined vertical and horizontal movement. As the lifting platform is fitted in the floor, it becomes a natural part of its surroundings and is therefore suitable for listed buildings and locations which call for aesthetic solutions.

Use

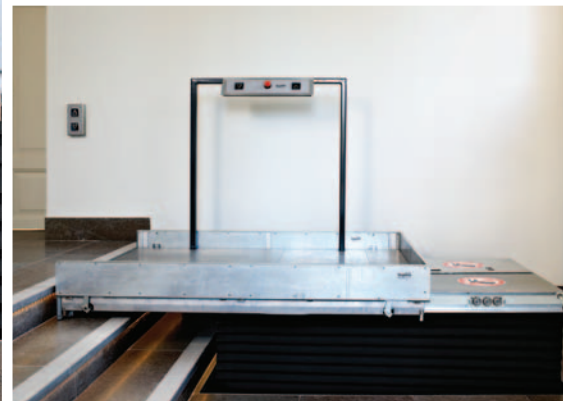

LP50H is integrated into the floor in front of steps and is designed for permanent indoor installation. When the lifting

platform is activated, the platform's four safety edges are automatically raised, ensuring that the user does not roll over the edge. When the user is at the upper level, the safety edge at the front is automatically lowered, allowing the user to exit the platform. It is possible to customise the covering of the platform with tiles, wooden flooring and marble so that it matches the existing floor.

LP50H, with its combined vertical and horizontal movement, and LP50, which only lifts vertically are both available.

LP50H specifications

Lifting height, max	500 (750) mm
Lifting capacity up to	450 kg
Internal dimensions	1450 x 1085 mm

LP8

LP8 is used in places where level differences of up to 3 m need to be negotiated. LP8 enables the majority of users to be self-reliant. Easy accessible operating buttons are located on the platform and control panels for both upper and lower levels are supplied. The gates open and close automatically. The LP8 is available with gates and sides in glass or perforated steel plates.

LP8 specifications

Lifting height, max	3 m
Lifting capacity	350 kg
Internal dimensions	1524 x 923 mm

Solutions for public transport ranges from simple ramps and mobile lifting platforms to specially designed products. Selecting a solution depends first and foremost on the height difference, but also on the individual needs, wishes and requirements that apply when proper accessibility conditions must be established.

Public transport

Stepless has developed a range of different solutions for public transport, which are all intended to create better conditions for passengers in wheelchairs, as well as those of reduced mobility.

We can offer portable ramps, mobile lifting platforms as well as special solutions.

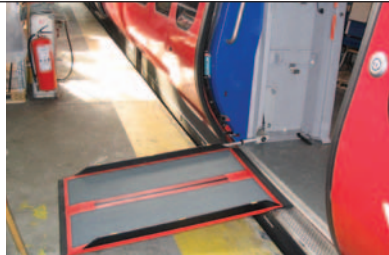

Portable ramps

Our portable ramps can be used for public transport. The Lite and EasyFold-Pro ramps are particularly suitable for use on public transport. They are typically used as loose ramps or stored in a cupboard located either on the train or the platform. We can design and produce the cupboards, ensuring that they are suitable for the surroundings and requirements.

We have produced a ramp brochure, which shows our various ramps. You can view it at www.guldmann.com.

Specifications – loose ramps

Interior width from	760 - 800 mm
Length	variable
Load up to	350 kg

Fixed ramp for trains

Stepless has specially designed and produced a ramp solution so that wheelchair users can get in and out of trains. It only takes 10 seconds for the train staff to operate the ramp and make it ready for use.

The ramp is folded along its width and placed in the cabinet by the door. The ramp distinguishes itself by being fitted with a mechanical arm which ensures fast and secure unfolding of the ramp, without train personnel having to perform heavy lifting.

Specifications – fixed ramps

Interior width	800 mm
Length	1337 mm
Load	300 kg

Lifting platform LP11

The LP11 is a mobile lifting platform specially designed to lift wheelchair users in and out of trains. Thanks to its design and light construction the LP11 is easy to move and position. The lifting platform is quick and easy to operate and only needs to be operated by one person.

Flexible fit for all trains

The LP11 is standard-equipped with a width-adjustable ramp. The ramp can be adjusted 630-800 mm width-wise so that it can be adjusted to different train door widths.

LP11 specifications

Lifting height, max	1000 mm
Lifting capacity	300 kg
Internal dimensions	1400 x 850 (811) mm

Stepless – Access for all

Under the Stepless brand we sell accessibility – accessibility that gives the walking-impaired, wheelchair users and others on wheels access to their surroundings.

- Portable ramps & doorstep ramps
- Modular ramp systems
- Lifting platforms

Guldmann – Time to care

Under the Guldmann brand we are engaged primarily in improving the overall working environment within the health care sector, where people need assistance being moved, lifted and positioned.

Guldmann Consulting – Competence development

Tailor-made educational programmes, project courses, topic days, seminars, lectures, analyses and evaluations from an ergonomic perspective. Our particular area of expertise is the physical working environment surrounding the transfer, mobilisation and rehabilitation of people/patients.
