

## Avero Motion Reclining Bath

The Avero Motion is the new fresh approach to stylish and comfortable bathing offering a safe experience for the client or patient whilst understanding the needs of the care giver.

Our specialist design team have worked very closely with professionals in the care and therapy sector for many years. This has enabled us to combine a contemporary appearance with practical performance keeping the needs of the client and caregiver paramount.

Only one carer is needed to operate the Avero Motion and safely control the practical functions which have been incorporated into this bath. The carer can easily adjust the height of the bath and perform the reclining motion for easy access and bathing positioning making it simple to operate.
