

COMFORT HEIGHT ADJUSTABLE BATH

The Comfort height adjustable bath is the next generation in patient handling baths and boasts a Bariatric capacity. This beautifully designed tub has been sculptured to give maximum internal space with a minimum external footprint of a little over 2 metres.

Resting against the double insulated bath shell, the bather has ample room within the bath whilst the footplate offers three position settings for maximum safety.

The Comfort bath offers the perfect solution for the larger, highly dependent bather and is compatible with all types of overhead and floor hoists, whilst its robust and stylish hoist access panels ensure the easiest of access for the carer when assisting the bather.

Also available is the Comfort DC bath for dementia care environments.
