

*Chosen by major care home groups, the Compact 1600 and 1700 DC bath is the ONLY bath specifically designed for dementia care.*

## COMPACT DC BATH

With standard features such as WRAS Showersafe gantry, Autofill, digital temperature readout and lockout handset, all with our unique 'failsafe' auto cut off feature, the Compact DC bath offers one of the safest and most effective bathing systems available today.

The Compact DC variable height bath's integrated powered seat with its lap strap and nursing arms ensures that the bather is transferred safely and comfortably whilst the unique 'Slipper' shaped bath tub cocoons the bather and offers one of the most spacious internal dimensions in a bath of its kind.

Hoist transfers are easily facilitated with the Compact DC bath due to the robust GRP panels and hoist access feature, whilst the battery backup ensures that, in the event of mains failure, the client can always be assisted out of the bath.

Available in two lengths, 1600mm and 1700mm, the Compact DC bath, ensures that you need not compromise even if space is an issue within your bathroom.
