

## Rio Height-adjustable Bath

The Rio bath from Astor-Bannerman uses the highest quality materials including the new twin actuators, which make this one of the quietest hi-lo baths available today. We also incorporate one of the smoothest height adjustable rail systems on the market, making the Rio supremely stable in any position.

There are a variety of features incorporated into the Rio as standard, such as the extra large open area under the bath, which allows all types of floor hoists to be used.

On top of this, the width of the bath has been increased to 755mm maximising bathing pleasure for the client and the care giver. As with all Astor-Bannerman baths, the Rio will comfortably accommodate all types of internal body supports.

This beautifully designed and finished bath will enhance any bathroom environment, allowing the client the dignity of taking a bath in the comfort of their own home, while also allowing the care giver to have the pleasure and convenience of bathing the client at a safe and comfortable working height, helping to reduce the risk of back strain.

Rio bath shown with Neatfold stretcher and low profile taps
